SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: [Insert date]

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. TEAM AND PROJECT OVERVIEW

Team Name

Byte Me

Project / Solution Name

myfuture - No1 Malaysia Career Compass

Name (Leader)

NG YI XUAN

Email & Phone (Leader)

yixuan1161@gmail.com 0125531161

University Affiliation(s)

UNIVERSITI TEKNOLOGI MALAYSIA

Live Prototype URL

https://my-future-career-guidance.replit.app

Code Repository URL (public / access granted to judges)

https://github.com/yixuanng26/SDC_HACKATHON_SUBMISSION

2. ARCHITECTURE & TECHNOLOGY STACK

2.1. System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

MyFuture's architecture employs a multi-tier, end-to-end cloud setup. The User Interface (UI) is built with React/TypeScript and hosted on Replit, featuring multi-disciplinary career dropdowns, assessments, and profile skill matching across 63 roles. When a user interacts with the app, frontend requests are routed to the Flask Backend (main.py) and executed through a serverless handler (handler.py) hosted on RunPod. This backend integrates real-time AI capabilities and structured rule engines to dynamically generate skill gap analyses and career recommendations. Data such as user profiles, multi-sector competencies, and learning paths are managed and securely stored. This resilient architecture ensures a seamless, full-discipline career guidance pipeline from UI interaction to AI-driven insights.

2. ARCHITECTURE & TECHNOLOGY STACK

2.2. Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
React	Frontend UI Framework	MIT License
Vite	Fronted Build Tool	MIT License
Python	Backend Server Language	PSFL
TypeScript	Static Typing and Type Safety	Apache License 2.0
Flask	Backend Web Framework	BSD-3-Clause

3. APIs & CLOUD SERVICES

3.1. External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API and Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
Replit	Used to develop and build the web application, including the user interface and main features.	Sponsor-provided
Runpod	Used to provide API and cloud computing services to support AI-related functions.	Sponsor-provided

3. APIs & CLOUD SERVICES

3.2. Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Github	Source code repository and version control	Free
Replit Deployment	Web application hosting and full-stack runtime	Sponsor-provided
RunPod Serverless	Cloud GPU compute for DeepSeek AI model inference	Sponsor-provided

4. AI TOOLS, MODELS & DATASETS

4.1. AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
deepseek-r1-distill-qwen-7b	Runpod	pre-trained	MIT License
-	Replit Agent	pre-trained	Replit Terms of Service

4. AI TOOLS, MODELS & DATASETS

4.2. Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
Synthetic Q&A Pairs	Generated by team	Synthetic	Team-owned	N

4. AI TOOLS, MODELS & DATASETS

4.3. AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☑ Yes ☐ No

If yes, list them below:

Tool & Version	Used For	Extent of Use (minor / moderate / major)
GitHub Copilot	Multiple developers can work on the same project simultaneously without overwriting each other's code.	Major
Gemini Plus	Brainstorming UI/UX design, drafting documentation, and debugging complex logic.	Major
Replit	Replit AI agent to generate initial project setup and fix deployment errors.	Major
Deepseek	Troubleshooting backend errors and optimizing database queries.	Minor

4. AI TOOLS, MODELS & DATASETS

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

All AI-generated code was reviewed line-by-line by team members before merging, and tested in a staging environment. AI-drafted documentation was fact-checked against our actual implementation. We take full responsibility for all output and confirm no sensitive data was shared with third party AI tools during development.

5. SPONSOR-PROVIDED RESOURCES

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☑ Yes ☐ No

If yes, list them below:

Sponsor	Resource (API / credits / platform / data)	How It Was Used in the Project
SDC Hackathon	Replit (20 credits)	Design website
SDC Hackathon	Runpod (25 credits)	Cloud-based GPU Acceleration for AI Inference

5. SPONSOR-PROVIDED RESOURCES

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

Yes, both sponsor resources were essential to the core functionally. Replit hosted the entire we application environment, making the live prototype accessible to users. RunPod provided the necessary GPU infrastructure to process our AI models. Without RunPod's compute power, the real-time career matching and AI-driven skill gap analysis on our MyFuture dashboard would not function.

6. SECURITY, PRIVACY & RESPONSIBLE USE

6.1. Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

No user data is collected.

6. SECURITY, PRIVACY & RESPONSIBLE USE

6.2. Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

The main limitation of our AI component is the potential for hallucination in career recommendations and skill gap analysis. The model may occasionally suggest non-existent certifications or biased career paths. To mitigate this, we ground our AI responses using verified local market data and provide a disclaimer that the dashboard is a guide, not a guaranteed hiring prediction. Additionally, because we rely on third-party AI APIs, our prototype is subject to rate limits and provider downtime. We have implemented error handling and fallback messages to manage API failures gracefully. Finally, to protect user privacy, we do not store raw CV data longer than necessary for the parsing process, and we ensure no personally identifiable information (PII) is sent to the AI prompt.

7. COMPLIANCE & READINESS

Tick all boxes that apply before submitting.

- [/] All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- [/] All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- [/] No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- [/] Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- [/] Any use of official SDC sponsor resources has been declared in Section 5.
- [/] The prototype described here is accessible to judges through the links provided in Section 1.
- [/] All fields in this template have been completed within the word limits stated.

8. DECLARATION

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.
