Rotaract Club of Xiamen University Malaysia

Rotary Club of Kuala Lumpur Dynamics

Rotary Club of Tun Razak Exchange

SDC Hackathon

Phase 1 : Preliminary Project Proposal

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026

Instructions: Complete every field below and submit as a single PDF document named "SDC2026_TeamName_Preliminary.pdf" before the deadline above. Answers must comply with the word limits stated for each open-ended question. Incomplete submissions may not be eligible for review.

1. TEAM AND PROJECT OVERVIEW

Team Name

Byte Me

Selected Domain

Domain 1

Selected SDG Track (1–17)

SDG 4 – Quality Education

Project / Solution Name

myfuture - No1 Malaysia Career Compass

Name (Leader)

Ng Yi Xuan

Email & Phone (Leader)

yixuan1161@gmail.com 0125531161

University Affiliation(s)

UNIVERSITY TEKNOLOGI MALAYSIA

Number of Team Members

5

2. EXECUTIVE SUMMARY & PROBLEM STATEMENT

2.1. The Problem Context

Describe the specific, real-world challenge your team is tackling. Who is affected by this problem, and why does it matter? Highlight the critical social, environmental, or economic issues involved.

[Maximum 250 words]

Artificial Intelligence (AI) is changing the job market and affecting both working adults and fresh graduates. As AI technology continues to develop, people need to understand how these changes may affect their careers and future opportunities.

Working adults who perform data entry and basic office tasks may face the risk of having some of their tasks automated by AI. This may change their job responsibilities and reduce the demand for certain skills. As a result, they may need to learn new skills and improve their knowledge to remain relevant in the workplace. Without proper training, they may find it difficult to adapt to changes in their jobs.

Fresh graduates also face challenges when entering the job market. They may feel uncertain about which career path to choose because AI is changing job requirements and creating new skill demands. Some graduates may struggle to identify suitable jobs that match their interests, abilities, and qualifications. Without proper career guidance, they may choose a career that has fewer future opportunities.

These challenges matter because employment affects people's income, financial stability, and future development. Therefore, working adults need opportunities to improve their skills, while fresh graduates need guidance to make better career decisions.

Our solution aims to use AI to help working adults identify skills they need to improve and help fresh graduates discover suitable future careers. By providing personalised career recommendations, future job trends, and step-by-step learning pathways, we hope to help people prepare for changes in the job market and build a more future-ready workforce.

2. EXECUTIVE SUMMARY & PROBLEM STATEMENT

2.2. The Proposed AI Solution

Provide a high-level overview of your proposed application. How does it apply artificial intelligence to solve the problem stated above? Briefly mention the tools or technical skills gained from the SDC Phase 1 workshops (e.g., GenAI APIs, database architecture, cloud hosting) that you intend to leverage.

[Maximum 300 word]

Our proposed application is an AI-powered career guidance platform designed to help working adults and fresh graduates prepare for future job opportunities. The application uses artificial intelligence to analyse users' skills, interests, and career preferences to provide suitable career recommendations.

The application includes a personality and skills assessment to help users understand their strengths and identify areas for improvement. It also provides information about the latest global job trends to help users understand how AI is changing the job market. Based on the assessment results, the application recommends suitable future careers and identifies the skills users need to develop. It also provides personalised learning pathways to help users improve their skills and prepare for future employment.

To support these functions, our project will use an AI API with the model **DeepSeek-R1-Distill-Qwen-7B** to process information and assist in generating career-related recommendations. The AI will help analyse user inputs and provide relevant suggestions based on the available data.

For development, we plan to use Replit to build the web application, RunPod to support API deployment, and GitHub to store and manage our source code. These technologies will help us develop a functional prototype that is accessible and easy to use.

Our goal is to use AI to make career guidance more accessible, help users identify future opportunities, and encourage lifelong learning in support of SDG 4: Quality Education, SDG 5: Gender Equality, SDG 8: Decent Work and Economic Growth, SDG 9: Industry, Innovation And Infrastructure, SDG 10: Reduced Inequalities.

3. TECHNICAL ARCHITECTURE & IMPLEMENTATION PLAN

3.1. Conceptual Tech Stack

List the technologies, frameworks, APIs, and databases you plan to use to build a functional, deployed prototype. Describe (or attach as an appendix) a simple system block diagram showing how the workshop elements connect into one architecture.

Did your project utilize any official SDC sponsor-provided GenAI API or Cloud Platform? If yes, specify which one and how it is used.

Our project will use several technologies and tools to develop a functional AI-powered career guidance web application.

Technologies and Tools:

1. **Replit:** Used to develop and build the web application, including the user interface and main features.
2. **RunPod:** Used to provide API and cloud computing services to support AI-related functions.
3. **Gemini:** Used to assist with generating and improving source code during development.
4. **DeepSeek:** Used to assist with data analysis and processing for career recommendations.
5. **GitHub:** Used to store, manage, and share the project's source code among team members.

System Architecture:

Users enter their skills, experience, and interests through the web application built with Replit. The application processes their information and uses AI-related functions to help identify suitable career options and skills gaps. RunPod supports the API infrastructure, while Gemini and DeepSeek assist the development and AI-related tasks. GitHub stores the source code and allows team members to collaborate.

SDC Sponsor-Provided Platforms:

Yes, our project will utilise the official SDC sponsor-provided platforms, **Replit and RunPod**. Replit will be used to build the web application, while RunPod will support API-related functions.

3. TECHNICAL ARCHITECTURE & IMPLEMENTATION PLAN

3.2. Design-Thinking & Deployment Strategy

Explain how your team applied design-thinking methodology to ensure this solution is technically viable, user-friendly, and ready for real deployment by Phase 2.

[Maximum 200 words]

Our team will apply design-thinking principles to develop an AI-powered career guidance application that is user-friendly, practical, and accessible to different users.

First, we identify the needs of working adults and fresh graduates who need help choosing suitable career paths and improving their skills. We will develop an application with **multi-language support** to make it easier for users from different backgrounds to access the platform.

The application will include a **personality and skills test** to understand users' interests, strengths, and abilities. Based on their results, it will provide suitable career recommendations. It will also display the **latest global job trends** to help users understand which jobs and skills are becoming more important in the future.

Additionally, the application will provide **professional comments and career advice from employers** to help users make better career decisions.

For deployment, we will build and test the application using Replit and use RunPod to support API-related functions. We will collect user feedback, identify technical problems, and improve the interface and features to ensure the application works properly.

Our goal is to provide an accessible and useful platform that helps users prepare for future career opportunities in the AI era.

4. PRELIMINARY ENVIRONMENTAL& SDG IMPACT FRAMEWORK

To align with SDC's focus on meaningful global sustainability, establish your project's impact baseline before building the prototype. Use estimated data, published research, or public benchmarks where exact figures are unavailable. Provide the citation of any sources used.

The target, baseline, and KPI you provide here will be used by judges during shortlisting to assess Innovation and Creativity as well as Feasibility of build. Vague or unsupported projections may weaken your case for advancing to Phase 2.

4. PRELIMINARY ENVIRONMENTAL& SDG IMPACT FRAMEWORK

Metric Category	Your Response
Target SDG Sub-Target(s) *Identify the exact UN SDG sub-target your project addresses* *e.g., Target 11.6 "Reduce the adverse per-capita environmental impact of cities, focusing on air quality and waste management."*	**SDG 4: Quality Education** **SDG 4.4:** Increase the number of youth and adults with relevant skills for employment and decent jobs. Our project helps working adults improve their skills and fresh graduates identify the skills needed for future careers through AI-powered career recommendations and personalised learning pathways. **SDG 8: Decent Work and Economic Growth** **SDG 8.5:** Promote productive employment and decent work for everyone. Our project helps working adults and fresh graduates find suitable career opportunities through future job trends and personalised career recommendations, improving their employment prospects.
Current Problem Baseline *What is the starting condition of the problem, expressed as a number?* *e.g., "The target infrastructure currently experiences 35% energy inefficiency due to unoptimized scheduling."*	Working adults who perform data entry and basic office tasks may need to develop new skills as AI technology advances. Meanwhile, fresh graduates may struggle to choose suitable career paths and identify the skills required for future jobs. Both groups may lack access to personalised career guidance and relevant learning resources. Our project will establish a baseline by surveying working adults and fresh graduates about their current skills, career confidence, and awareness of future job trends before using the application. The survey results will help us identify their main challenges and measure improvements after using our application.

4. PRELIMINARY ENVIRONMENTAL& SDG IMPACT FRAMEWORK

Metric Category	Your Response
Core Measurable KPI *The specific unit you will track* *e.g., % reduction in power consumption, processing-latency improvement, or kg of resource waste avoided*	We will measure the number of users who complete the personality and skills assessment, the percentage of users satisfied with their career recommendations, and the number of users who access personalised learning pathways. These measurements will help evaluate the application's effectiveness in supporting skill development and career planning.
Phase 2 Impact Target *Your realistic, percentage-based target by the final prototype presentation* *e.g., "20% improvement in computational resource use."*	Our target is to achieve an 80% career recommendation satisfaction rate among test users and help at least 70% of users identify the skills they need to improve for future careers. These targets support SDG 4 by promoting skills development and lifelong learning, and SDG 8 by helping users prepare for suitable employment opportunities.

5. ELIGIBILITY & READINESS CHECKLIST

Tick all boxes that apply before submitting.

☑ All team members have completed the mandatory GenAI, Database, and Cloud Deployment upskilling workshops.

☑ The project concept addresses a verified real-world problem mapped directly to one or more UN SDGs.

☑ The proposed solution targets a functional, deployed application rather than a theoretical business case study.

☑ All fields in this template have been completed within the word limits stated.

6. IP & ORIGINALITY DECLARATION

6.1. Pre-Existing / Prior-Owned Work

Does this submission include any code, design, research, or other work that any team member created or owned before the start of this hackathon?

☐ Yes ☑ No

If yes, briefly describe what was pre-existing and which team member(s) owned it:

6. IP & ORIGINALITY DECLARATION

6.2. Third-Party Code, Datasets, or Models

Does your project use any third-party code libraries, open-source frameworks, public/private datasets, or pre-trained AI models that your team did not create?

☑ Yes ☐ No

If yes, list them below (open-source use is permitted provided it is declared and properly licensed/attributed):

Name	Type (code/dataset/model)	License
Himalayas Job Board API	Dataset / API	Public API Terms of Service
DeepSeek-R1-Distill-Qwen-7B	Model	MIT License
React / Vite	Code	MIT License

6. IP & ORIGINALITY DECLARATION

6.3. Employment-Related IP Conflicts

Is any team member currently bound by an employment, internship, or consulting agreement under which their employer could claim ownership of work they create during this hackathon?

☐ Yes ☑ No

If yes, please describe the nature of the agreement and which member it concerns:

7. DECLARATION

By submitting this proposal, the team leader confirms that the information provided is accurate to the best of the team's knowledge and that the project will be original work created during the SDC 2026 hackathon period.
